Nel periodo di attività come Funzionario Tecnico nel Dipartimento di Chirurgia Generale e Vascolare dell'Università di Brescia il Dott. Muiesan ha collaborato in progetti scientifici studiando le modificazioni delle resistenze a livello delle arteriole in pazienti con ipertensione essenziale utilizzando sofisticate tecniche di micromiografia.

Durante l'esperienza nel Dipartimento di Chirurgia Generale e Vascolare ha dimostrato interesse per la chirurgia del fegato, in seguito al quale è stato accettato come Honorary Registrar al King's College Hospital (London, UK) per la formazione nel Trapianto di Fegato. Ha iniziato eseguendo prelievi multi-organo e trapianti di fegato dal 1993, completando 170 prelievi multi-organo nei primi 2 anni. Nel proseguimento della sua carriera in UK ha proseguito la propria formazione ottenendo l'incarico, per meriti, come Senior Registrar nella Liver Unit presso il King's College Hospital.

È stato nominato Consultant Surgeon nel 1998. Ha lavorato in turni 1:3 nel servizio di trapianto di fegato e nella chirurgia epato-biliare ed ha assicurato turni di guardia, servizio ambulatoriale e assistenza di reparto di pazienti sottoposti a trapianto di fegato per un volume di circa 190 trapianti /anno, circa 40 dei quali in pazienti pediatrici.

Ad oggi ha effettuato più di 900 trapianti di fegato come primo operatore, inclusi 143 trapianti pediatrici, ha inoltre introdotto il programma di trapianto epatico da donatore vivente a Birmingham sia in pazienti pediatrici che adulti. Nel contesto del trapianto da donatore vivente ha collaborato allo sviluppo di trapianti in India, Pakistan e nella repubblica Ceca. Ha eseguito più di cento procedure split sia in situ che su banco e di queste 6 per adulti (full right full left split). Ha inoltre eseguito 16 trapianti di fegato ausiliari nel contesto di episodi di insufficienza epatica acuta e di malattie metaboliche al King's College Hospital al Children's ed ha introdotto la tecnica al Queen Elizabeth Hospitals a Birmingham. Si è formato nel trapianto di intestino e nel trapianto multiviscerale ad Omaha, Nebraska e a London, Ontario e attualmente esegue trapianti di piccolo intestino e trapianti multiviscerali presso il Birmingham Children's Hospital.

Il Prof. Muiesan ha diretto lo sviluppo del primo programma di trapianto di fegato da donatori per morte circolatoria (DCD) nel Regno Unito durante il suo lavoro presso il King's College Hospital. I risultati iniziali hanno fornito la base su cui è stato introdotto il trapianto di fegato da DCD negli altri centri a livello nazionale [Muiesan P., Girlanda R., Jassem W., Melendez H.V., O'Grady J., Bowles M., Rela M., Heaton N. Single-center experience with liver transplantation from controlled non-heartbeating donors: a viable source of grafts. *Ann Surg.* 2005;242(5):732-8].

Ha inoltre sviluppato il programma di trapianto di fegato da DCD attualmente attivo presso il Queen Elizabeth Hospital Birmingham introducendo anche il nuovo servizio di ECMO, utilizzato per migliorare la perfusione e la preservazione degli organi addominali provenienti da DCD. Ha organizzato il secondo "National UK Meeting on Normothermic Regional Perfusion using ECMO in organ donors" ed ha avviato e organizzato 7 edizioni dell'"International Meeting on transplantation of organs from DCD".

Parallelamente all'esperienza nel trapianto ha contribuito allo sviluppo di tecniche di chirurgia epato-biliopancreatica eseguendo principalmente resezioni epatiche, sia in chirurgia a cielo aperto che laparoscopica, per patologia metastatica, colangiocarcinoma e carcinoma epatocellulare. Ha introdotto per primo la epatectomia in due tempi con la tecnica ALPPS, la resezione del tronco celiaco per tumori pancreatici (Appleby procedure) e la resezione epatica ex-vivo con autotrapianto ed di sostituzione cavale con reimpianto in situ del drenaggio venoso del fegato residuo per tumori epatici con coinvolgimento delle vene sovraepatiche, al Queen Elizabeth Hospital a Birmingham. E' inoltre coinvolto nella pratica chirurgica di patologie oncologiche del pancreas (procedura di Whipple, pancreasectomia distale e totale) in particolare con resezioni vascolari dell'asse portale e nelle procedure di drenaggio del dotto pancreatico nelle pancreatiti croniche. Effettua interventi di chirurgia nei traumi epatici complessi e nelle complicazioni dei dotti biliari e resezioni epatiche in laparoscopia. Ha sviluppato il servizio clinico per il trattamento del carcinoma epatocellulare presso il King's College Hospital, che ha comportato l'apertura di un nuovo reparto di degenza cui fanno riferimento una media di 300 nuovi casi/anno.
